Unparalleled expertise, proven performance

For over 56 years, Wilson Construction has earned a reputation for delivering superior design/build high voltage solutions. National and regional clients hire us time and again because they know we perform on-time and on-budget. They count on our expertise and collaboration to solve challenges in:

- Construction of overhead and underground electrical distribution
- Substations and switchyards
- Power-plant interconnects
- Underground and overhead transmission lines through 500kV

Clients also value our agile, non-bureaucratic organization. To them, it means more competitive bids, tight scheduling flexibility and responsive personalized service.

400+ highly-skilled workers, 800 pieces of specialized equipment

Wilson is ready, willing and able to meet the demanding specifications of your project. The comprehensive capabilities offered by our skilled workers and support personnel include:

- Project development
- Permitting
- Engineering
- Procurement
- Construction

Thanks to our Hughes MD500E Helicopters, Wilson provides the flexibility for fast-track, nationwide capabilities on short notice. Whether it is working under strict outage requirements or tight scheduling demands, we have proven our ability to deliver safe and efficient solutions for more than five decades.

OVERHEAD TRANSMISSION

Expertise all over the U.S.

The ability to respond to transmission challenges is standard protocol with our overhead group. An experienced and knowledgeable team of professionals brings their expertise to complete overhead transmission line projects through 500kV.

When you work with Wilson you can expect unparalleled comprehensive and diverse capabilities. These include:

- Innovative design/build solutions
- Fast-track scheduling for tight outage restraints
- Immediate access to helicopter capabilities
- Environmental services

SUBSTATION & SWITCHYARD EXPERTISE

Minimal lead times and delays

Whether your project is located in an urban setting or remote location, we know how to get it done. Our team can be mobilized quickly, begin construction and meet your objectives in a timely manner. With switchyard experience up to 500kV, you will find the expertise your project demands.

UNDERGROUND TRANSMISSION

High customer ratings in the U.S.

Our underground transmission team is consistently rated as one of the leading teams in the nation designing and constructing underground transmission projects with the highest quality. The Wilson team has:

- Installed more than 1,947,030 feet of XLPE cable through 345kV
- Performed more than 633 terminations
- Completed over 674 splices

ENVIRONMENTAL SERVICES

Exceeding customer expectations

In the utility construction world, you need to meet rigid government and industry standards. We provide the expertise and process necessary for compliance and high customer satisfaction. Services include:

- Mitigation planning and implementation
- Environmental monitoring during construction
- Restoration/erosion control planning and implementation
